

## July 2017 – Million Hearts® Messaging

**Celebrate the start of summer in July by getting outside to exercise with a cardio rehabilitation program. Those recovering from a heart attack or cardiovascular event are eligible for this important program, which also encourages participants to adopt a heart healthy diet, reduce their stress, quit smoking and take their medications as prescribed.**

### **July's Focus**

It's July and that means summer is officially here. For those recovering from a heart attack, stroke or other cardiovascular event, it's a great time to get outside and get moving in a cardiac rehabilitation program. Ask your doctor if you qualify for a cardiac rehab program today! A reminder to doctors and

other health care professionals to refer all eligible patients. Family and friends can help too by encouraging those recovering from a heart attack or stroke to take part in this important program.

### **Did you know?**

- Cardiac rehabilitation is a 3-month supervised exercise program that also provides patients with education about how to adopt a heart healthy diet, reduce their stress, quit smoking and take their medications as prescribed.
- Cardiac rehabilitation is an important step for patients recovering from a heart attack, heart failure, stroke, angioplasty, heart surgery or other cardiovascular event. It can help lower their risk of another heart attack or cardiovascular event.
- According to studies, people who go to cardiac rehab have up to 30 percent fewer fatal heart events, and are 25 percent less likely to die compared to people getting standard therapy alone.
- Unfortunately, many people who could benefit from cardiac rehabilitation don't. A recent study found that one in three patients who are eligible don't receive a referral from their doctor, and only one in four patients referred actually go.
- Many patients do not complete their cardiac rehab program because of time and/or financial challenges.

Cardiac rehabilitation is a new priority for Million Hearts® 2022. As you know, Million Hearts® 2022 is a national initiative co-led by the Centers for Disease Control and Prevention (CDC) and the Centers for Medicare & Medicaid Services (CMS) to prevent one million heart attacks and strokes within five years. To achieve this, the initiative focuses on a small set of priorities selected specifically for their impact. Cardiac rehabilitation is one of these critical priorities.

With less than 30 percent of those eligible for cardiac rehabilitation being referred and enrolled, one of the goals for Million Hearts® 2022 is to boost the participant rate to 70 percent. Achieving this five-year goal would prevent 25,000 deaths and 180,000 hospitalizations a year. Doctors and health care providers can help achieve this goal by referring all eligible patients to cardiac rehab. Patients can help by participating in this program. Family and friends can help by encouraging and supporting their loved ones as they participate in this important step toward becoming heart healthy.

## What is **CARDIAC REHABILITATION?**

### **1** Regular Exercise

From supervised activities, to a daily walk in the park, the idea is to get moving.

### **2** Adopt a Heart Healthy Diet

This includes meals that are low in salt and rich in whole grains, fruits, vegetables, low-fat meats and fish.

Cardiac Rehabilitation Programs Typically Consist Of The Following **5** Components

### **5** Stop Smoking

Most cardiac rehab programs offer methods to help you kick this harmful habit.

### **4** Medical Therapy

Follow your doctor's instructions carefully and take your medications as directed.

### **3** Reduce Stress

Learn to control your daily stress through relaxation techniques, recreation, music and other various methods.

**TALK TO YOUR HEALTH CARE PROVIDER**  
about enrolling in a cardiac rehab program **TODAY!**

## CARDIAC REHAB can:

**Lower the chances** of a 2nd heart attack or heart surgery

**Lessen chest pain**, and in some cases, the **need for medications**

**Control risk factors** such as high blood pressure & cholesterol

**Help with weight loss**

**Reduce overall risk** of dying or having a future cardiac event

## Reducing Sodium: From Menu to Mouth

 Excess sodium can lead to high blood pressure, a major contributor to **heart disease** and **stroke**

 Home prepared meals have **less sodium** than meals prepared in fast food or sit down restaurants

### What Can You Do?

**Ask for sodium content before ordering, or check online before eating out.**

	Home prepared meals have less sodium per calorie than meals prepared in fast food or sit down restaurants, on average
	Food from fast food restaurants contains <b>1,848 mg</b> sodium per 1,000 calories, on average
	Food from sit-down restaurants contains <b>2,090 mg</b> sodium per 1,000 calories, on average

**2,300mg Sodium per day**

The U.S. Dietary Guidelines recommend limiting sodium to less than **2,300 mg/day**, and about 6 in 10 adults should further limit sodium to **1,500 mg/day\***

\* Applies to those age 51 and older, and those of any age with high blood pressure, diabetes, or chronic kidney disease.  
\*\* Averages are for 2010-2012.  
† JOM Strategies to Reduce Sodium Intake in the United States  
‡ Sodium content was determined using MenuScan.org

## TOP 6

Sources of Sodium from Restaurant Foods<sup>1,2</sup>

**Choose wisely to stay under 2,300 mg\*\***

-   
**170 to 7,260 mg**  
(per sandwich)
-   
**393 to 4,163 mg**  
(per slice of pizza containing meat)
-   
**200 to 2,940 mg**  
(per burger)
-   
**62 to 7,358 mg**  
(per chicken entrée)
-   
**250 to 4,870 mg**  
(per Mexican entrée)
-   
**4 to 4,530 mg**  
(per salad)

### **Million Hearts® challenges you to refer, enroll and support cardiac rehab**

It's July and that means summer is officially here. For many of us, that means picnics, barbecues, beach days, and festivals. For those recovering from a heart attack, stroke or other cardiovascular event, it's a great time to get outside and get moving in a cardiac rehabilitation program.

Ask your doctor if you qualify for a cardiac rehab program today! Doctors and other health care professionals, remember to refer all eligible patients for cardiac rehabilitation. Family and friends can help by encouraging loved ones recovering from a heart attack or stroke to take part in this important program. You can exercise with them as well!

What is cardiac rehabilitation?

- It's a 3-month supervised exercise program that also provides patients with education about how to adopt a heart healthy diet, reduce their stress, quit smoking and take their medications as prescribed.
- It's an important step for patients recovering from a heart attack, heart failure, stroke, angioplasty, heart surgery or other cardiovascular event because it can help lower their risk of another heart attack or cardiovascular event.

According to studies, people who go to cardiac rehab have up to 30 percent fewer fatal heart events, and are 25 percent less likely to die compared to people getting standard therapy alone.

Unfortunately, many people who could benefit from cardiac rehabilitation don't take part in this program. A recent study found that one in three patients who are eligible don't receive a referral from their doctor, and only one in four patients who are referred actually go. Many patients do not complete their cardiac rehab program because of time and/or financial challenges, which is where friends and family members can help.

Cardiac rehabilitation is a priority for Million Hearts® 2022. With less than 30 percent of those eligible for cardiac rehabilitation being referred and enrolled, one of the goals for Million Hearts® 2022 is to boost the participant rate to 70 percent. Achieving this five-year goal would prevent 25,000 deaths and 180,000 hospitalizations a year.

So, as you celebrate the warm weather, be sure to make time for your heart health by seeking out a cardiac rehab program, referring your patients to a cardiac rehab program and/or supporting friends and family members who wish to take part in this important program.
